DETAILED ACTION

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1,3,5,7,9,and 11 are rejected under 35 U.S.C. 102(b) as being anticipated by Flick (patent # 5,374,283). Flick discloses an electrode fabric/garment device comprising (as explained in column 2, lines 50-66) conductive fibers formed of woven and knitted fiber networks consisting of nylon and metal. Flick further discloses a garment type embodiment of a conductive fiber network as seen in figures 1-8. As seen in figure 1and the disclosure relevant thereto, Flick discloses the steps of connecting the garment to a monitor and/or an impulse generator stimulator.

Flick further discloses a snap type connector lead connecting the fabric to a data output terminal as embodied by elements 24,25,32,44, and 45.

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Art Unit: 3739

Claims 2,4,6,8,10, and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Flick. With reference to the above rejections Flick discloses all that is claimed except the expressed disclosure of using a conductive paste between the fiber and the data output lead.

The examiner takes official notice of the old and notorious use of conductive pastes, creams, gels etc. to aid in the electrical conduction (to or from a patient) of a biomedical signal or impulse. The use of such electrolytes are known to increase signal conduction and quality by reducing contact impedance between elements. Accordingly, the use of conductive paste with the device of Flick would have been obvious to one having ordinary skill in the art.

Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to David M Ruddy whose telephone number is (703) 308-3595. The examiner can normally be reached on Mon-Fri 8:30-6:00.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Linda Dvorak can be reached on (703) 308-0994. The fax phone numbers for the organization where this application or proceeding is assigned are (703) 746-3376 for regular communications and (703) 746-3376 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is (703) 308-1148.
